

MPV15RHI Series

Compact, 12:1 Input PV Power 15W DC/DC Converters

Key Features:

- 15W Output Power
- 100 - 1200 VDC Input Range
- 4,000 VDC Isolation
- Input Under Volt Protection
- Output Over Volt Protection
- Compact Case
- Optional Chassis Mount
- Optional DIN Rail Mount
- -25°C to +70°C Operation
- >300 kHours MTBF

Electrical Specifications

Specifications typical @ +25°C, nominal input voltage & rated output current, unless otherwise noted. Specifications subject to change without notice.

Notes:

1. To meet the specified ripple and noise levels, external capacitors are required. See the typical connection information on page three for recommended values. For more information, please contact the factory.
2. All units will meet EN 55022 (CE/RE) class A with the input circuit shown in the "Typical Connection 2" diagram on page 3. Contact the factory for more information.
3. All units will meet EN 61000-4-4 (± 4 kV) with the input circuit shown in the "Typical Connection 2" diagram on page 3. Contact the factory for more information.
4. All units will meet the requirements of EN 61000-4-5 (± 1 kV/ ± 2 kV), with the input circuit shown in the "Typical Connection 2" diagram on page 3. Contact the factory for more information.
5. Lead temperature is measured 1.5 mm from the case.
6. Operation at no load will not damage the units, however, they may not meet all specifications.
7. It is recommended that a fuse be used on the input of a power supply for protection. For the **MPV1560-xxRHI** series, a 3.15A slow blow should be used.

Efficiency vs Input Voltage (Full Load)

Efficiency vs Output Power (VIN= 600 VDC)

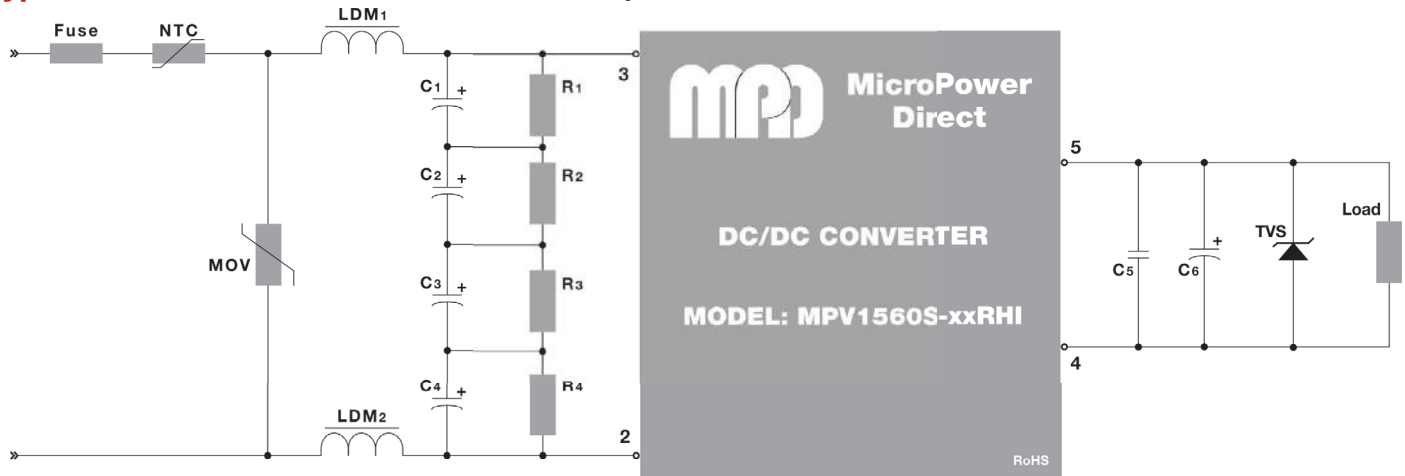

Typical Connection 1

The diagram at left illustrates a typical connection of the MPV1560S-xxRHI series. Output capacitors C6 and C5 are filtering components. They are required to meet ripple and noise specifications.

The recommended input components are a fuse, NTC, and MOV. The recommended component values for these are given in the table below.

Typical Connection 2: With External EMC Components

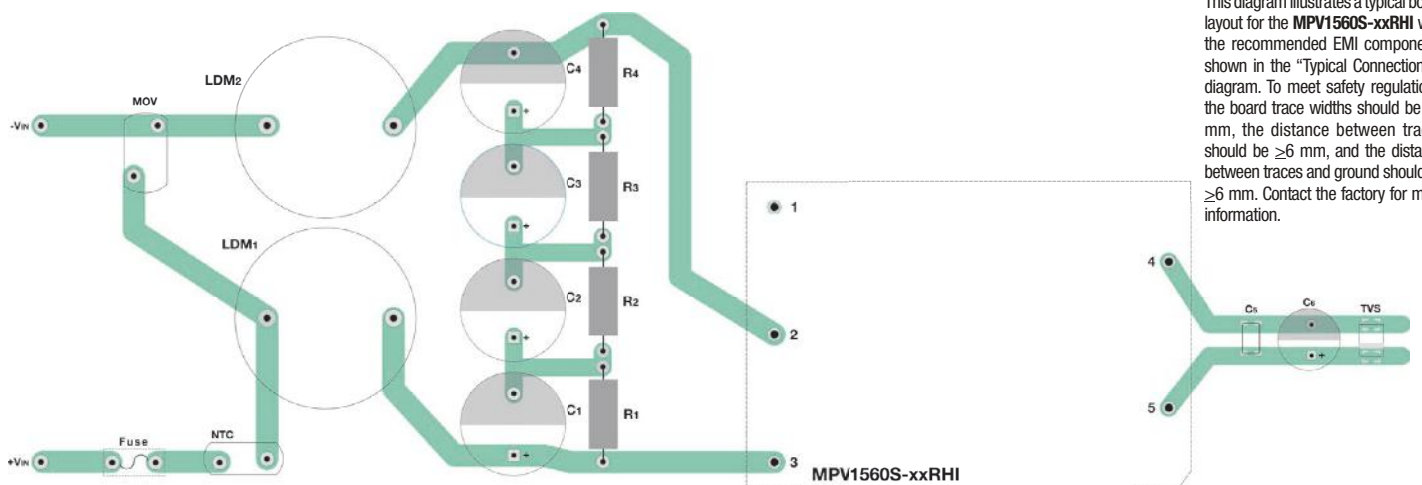

For applications that require meeting higher EMC standards, the circuit shown above is recommended. Some notes on this diagram (starting with the input circuit) are:

1. It is recommended that an external fuse be used. The recommended fuse is 1A/250V.
2. The NTC helps to prevent damage to the module in case an input current surge occurs. The recommended value is given in the table below.
3. The MOV helps to prevent damage to the module in case an input voltage surge occurs. The recommended value is given in the table below.
4. Capacitors C1, C2, C3 and C4 are input filter components (connected in series to achieve the required capacitance level). Resistors R1, R2, R3 and R4 help to balance the current across the capacitors.
5. Recommended values for components are:

6. Capacitor C5 is ceramic. This capacitor is used to filter high frequency noise. A recommended value is given in the table below.
7. Capacitor C6 is an electrolytic. A low ESR, high frequency capacitor should be used. The recommended value is given in the table below.
8. The output TVS will help protect system circuitry if power supply fails. A recommended value is given in the table below.
9. Derating on all capacitors should be 80% or more.

Model Number	External Components							
	NTC	MOV	LDM1, LDM2	C1, C2, C3, C4	R1, R2, R3, R4	C5	C6	TVS

MPV1560S-15RHI								SMBJ20A
MPV1560S-24RHI								SMBJ33A

Typical Board Layout: With External EMC Components

This diagram illustrates a typical board layout for the MPV1560S-xxRHI with the recommended EMI components shown in the "Typical Connection 2" diagram. To meet safety regulations, the board trace widths should be ≥ 3 mm, the distance between traces should be ≥ 6 mm, and the distance between traces and ground should be ≥ 6 mm. Contact the factory for more information.
